Hi, I'm Brooklyn, A UI designer with experience completing a wide range of projects from mobile apps to responsive web apps. After completing my course at career foundry I have learned a wide range of new skills and so much more about design. Not only UI design but UX and other skills as well. Ive always loved to be creative and this new field gives me a chance to do just that. I have a passion for making a website come to life. I have come to love the process of watching a project go from just sketches all the way to polished mockups. I have had the opportunity to collaborate with teammates which has allowed me to become more efficient in communication and working with a team. I am able to handle multiple tasks at one time and stay organized. I am proficient in taking a website from paper sketches all the way to mockups and ensure my designs are prompt and clean. These skills have prepared me to excel as a UI designer because I feel confident in what I have learned and what I can implement and offer customers. I am looking to pursue a career in UI design to express my creativity and do what I love.

Key skills
-prototyping
-wireframing
-logos
-mockups
-basic HTMC & CSS
-style guide
-figma
-icons
-Mood Boards
